

**CPAIOR-2014, Cork/Ireland, 23 May 2014**

---

**Experience in industrial deployment of  
Constraint Programming technology**

**Mehmet Dincbas**

**COSYTEC**

**Orsay, France**

**[www.cosytec.com](http://www.cosytec.com)**

## Plan

### ◆ Plan of the talk

- ▼ **A bit History (CP, ECRC, COSYTEC)**
- ▼ **Applications areas for CP**
- ▼ **Business sectors for CP**
- ▼ **What CP brings / benefits**
- ▼ **Specific requirements in industrial contexts**
- ▼ **Issues in design, development & deployment**
- ▼ **Case Studies**

## History / Constraint Programming

- ◆ **CP : A powerful computing paradigm**
  - ▼ **Appeared in 80's in the LP community (CLP)**
  - ▼ **Mixing declarative programming (LP) with “constraints solving”**
  - ▼ **Efficiency by combining “constraint reasoning” and “search procedures”**
  - ▼ **Integration of different techniques : AI, OR, Discrete Maths**
  
- ◆ **CLP / Pioneers**
  - ▼ **Prolog III : Univ. Marseille (F)**
  - ▼ **CLP(R) : IBM (USA)**
  - ▼ **CHIP : ECRC/Munich (D)**

## History / From ECRC to COSYTEC

### ◆ ECRC : Research in CLP (1985->1990)

- ▼ **CHIP : CLP with “Finite domains”, “Rationals”, “Booleans”**
- ▼ **Introduction of “symbolic constraints” --> combinatorial problems (cf. Alice)**
- ▼ **Applications of CHIP in different domains (prototypes) :**
  - OR : Project planning, Cutting-stock, Car sequencing, Warehouse location,...
  - Circuit design : Circuit verification, Fault diagnosis, Test generation,...
  - Finance : Portfolio management, Asset & Liability management, ...

### ◆ COSYTEC : Industrial deployment of CLP/CP (1990->)

- ▼ **Introduction of “global constraints”**
- ▼ **Concentration of Business on advanced Planning & Scheduling applications**

## What types of problems ?

---

- ◆ **Industrial organizations have combinatorial problems**
  - ▼ **Organization of Activities/Operations (e.g. production, transport, logistics)**
  - ▼ **Allocation of Resources (e.g. equipments, personnel)**
    - → **Planning & Scheduling of Activities & Resources**  
(part of « **Business Process Optimization** »)
  
- ◆ **Complex Planning & Scheduling problems**
  - ▼ **Multiple types of constraints, hard to find a feasible solution, dynamic config,...**
  - ▼ **Complementary to standard business packages : ERP, SCE/M, WMS, HRMS,...**
  - ▼ **Alternative to other “optimization” techniques : IP/MIP, SA/GA, ad-hoc methods,..**

## Main Application areas for CP (1)

### ◆ Production Scheduling & Supply Chain Management

- ▼ Assembly-line Design, Planning & Scheduling in Aircraft Manufacturing
- ▼ Maintenance Scheduling in Aircraft Manufacturing
- ▼ Automatic Generation of Process Operations in Metal Industry
- ▼ Real time scheduling of Steel product plant
- ▼ Optimal production scheduling in electronic components industry
- ▼ Planning Transport of Nuclear Fuel Assemblies to the Reprocessing Plant
- ▼ Circuit optimization of the primary logistics supply for multiple refineries
- ▼ Just-in time transportation from farms to factories in Food industry
- ▼ Planning & Scheduling of Resources in a Warehouse
- ▼ ...

## Main Application areas for CP (2)

### ◆ Workforce (Personnel) Planning & Scheduling

- ▼ Scheduling on-board TGV trains catering services
- ▼ Crew Planning for Mediterranean Ferries
- ▼ Automatic planning of firefighting personnel schedules & duty sheets
- ▼ Scheduling of Operations for the Personnel Planning in the Cleaning Industry
- ▼ Planning and Scheduling of activities and resources in Broadcasting/TV
- ▼ Planning of technical personnel in Broadcasting Services companies
- ▼ Simulation of work shifts to optimize the organization of the Personnel of prisons
- ▼ Optimal rostering of personnel in Retail
- ▼ Course Time-tabling and automatic assignment of Students to Courses
- ▼ ...

## Main Application areas for CP (3)

### ◆ Miscellaneous :

--> **Configuration, Placement, Packing, Assembling, Routing, ...**

- ▼ Fighter Aircraft reconfiguration
- ▼ Optimal configuration of telecommunications satellites
- ▼ Automatic allocation of stock spaces for Automobile Manufacturing Factory
- ▼ Optimization of the display panels in advertising networks in urban areas
- ▼ Optimization of take-off/landing sequence and runway allocation in Airports
- ▼ Intelligent cabling system for buildings
- ▼ Decision support in Water management
- ▼ ...

## Main Business sectors for CP

### ◆ Industry :

- ▼ **Aeronautics/Space, Nuclear Energy, Steel/Petrochemical, Manufacturing,..**
- ▼ **Ex. : Airbus, Dassault, EDF, ArcelorMittal, ERG, Toyota, Alcatel-Lucent, Fujifilm**

### ◆ Public Administration & Transport

- ▼ **Security/Emergency Services, Rail/Sea/Road/Air Transports**
- ▼ **Ex. : Min. Justice, Fire&Rescue Dept, Ferry(SNCM), Railways(W-Lits), JAXA**

### ◆ Service Sector

- ▼ **Media & Broadcasting, Retail, New services**
- ▼ **Ex. : Canal+, Arte, RTS, France24, RTL, Ericsson BSF, Castorama,...**

## Planning & Scheduling Software for Resource Management and Optimization

## What CP brings / Benefits

- ◆ **CP : a powerful paradigm for combinatorial problems**
  - ▼ High-level Modeling of Planning and Scheduling problems (cf. global constraints)
  - ▼ Efficient Constraint Solving, reasoning and propagation techniques
  - ▼ Flexible combination of Search procedures with Constraint solving
  
- ◆ **Other important features of CP**
  - ▼ Incremental constraint solving → interactive systems (Decision Support)
  - ▼ Possibility for relaxation of constraints (hard/soft)
  - ▼ Adaptability to reconfigurations
  - ▼ Fast prototype development

## Specific requirements in industrial contexts

- ◆ **Requirements for an industrial software :**
  - ▼ **Robustness : any use by anyone**
  - ▼ **Scalability : up-sizing of operations**
  - ▼ **Adaptability : change of configuration**
  - ▼ **Connectivity : easy integration**
  - ▼ **Portability : into any environment**
  - ▼ **Compatibility : with older releases**
  - ▼ ...
  - ▼ **Performance of the solution: cost , resp. time, use of comp. resources,...**
  - ▼ **Flexibility of the solution : any time / any case, scalable, parametrization,..**
  - ▼ **Ergonomy of the solution : easy to use, understandable**

## Issues for design, development & deployment

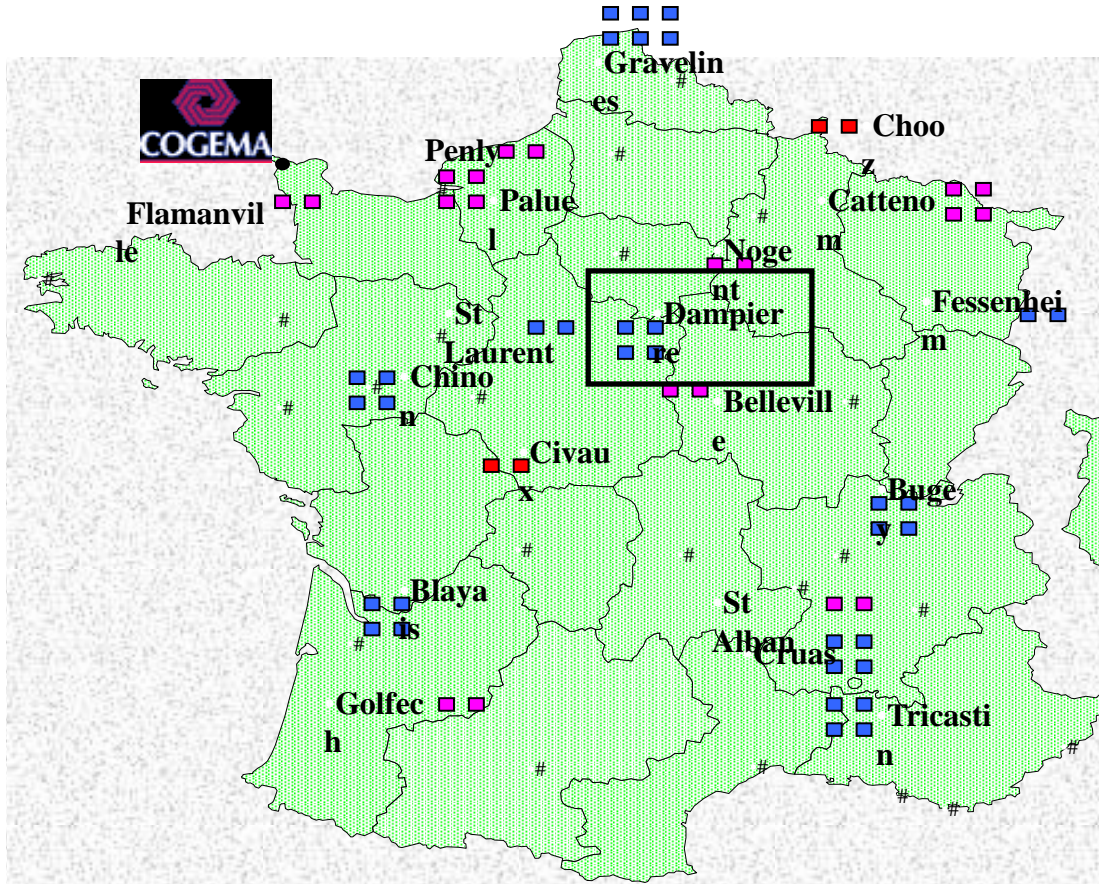

### ◆ Important issues in an industrial context :

- ▼ No formal description of the problem !
- ▼ Understand the business “needs” (-> cf. “business process”)
- ▼ Find the “right” problem to solve ! (-> improve the business process)
- ▼ Work in collaboration with the customer for FDS (not obvious !)
- ▼ Find the “right” modeling (-> can be solved “reasonably”)
- ▼ Look for a “reasonably good” solution : cost, resp. time, quality,...
- ▼ Look for a “flexible” solution : any time / any case, scalable, parameterizable
- ▼ Look for a “user-friendly” solution : easy to use, ergonomic, understandable
- ▼ ---
- ▼ Acceptance of the software & solution
- ▼ Change Management (organizational issue @ Customer)

## Case Studies

- ▼ Planning Transport of Nuclear Fuel Assemblies to the Reprocessing Plant
  - **EDF (Electricity of France)**
  
- ▼ Circuit optimization of the primary logistics supply for multiple refineries
  - **SDIS (Fire & Rescue Department of Rhone)**
  
- ▼ Automatic planning of firefighting personnel schedules & duty sheets
  - **ERG Petroli**
  
- ▼ Crew Planning for Mediterranean Ferries
  - **SNCM (Societe Nationale Corse Mediterranee)**
  
- ▼ Optimal rostering of personnel in Retail

## Nuclear Power Plants in France

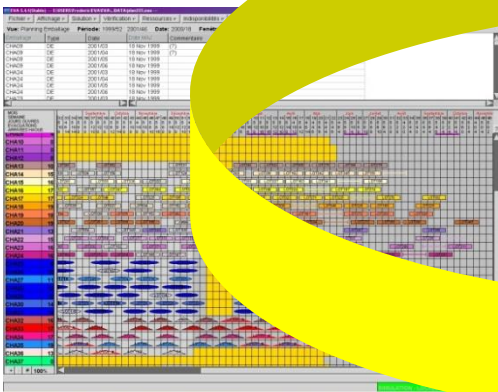

LA HAGUE

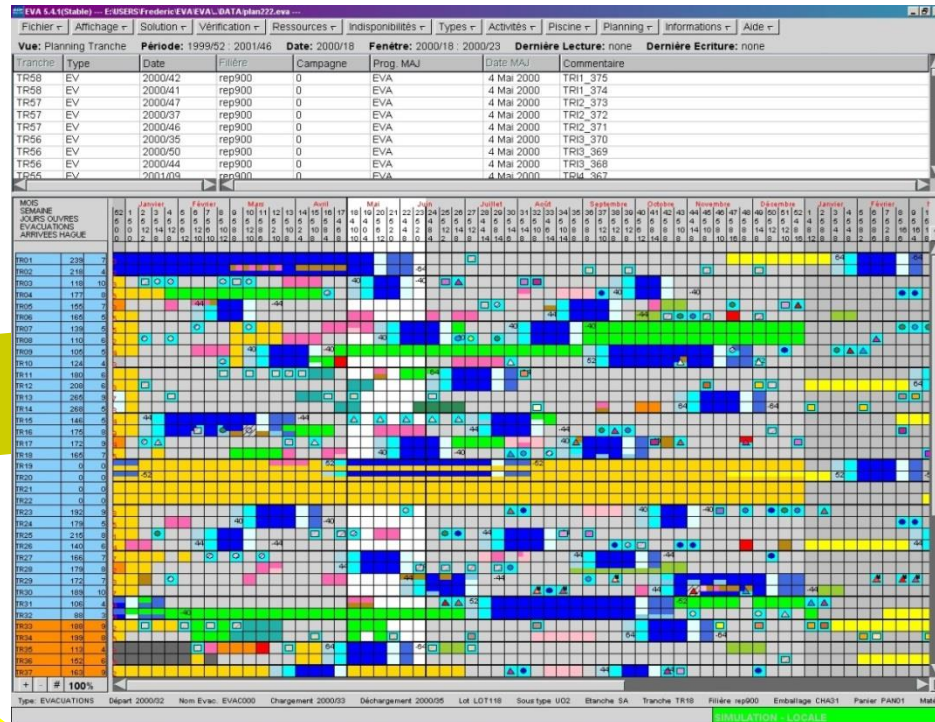

## Planning Transport of Nuclear Fuel Assemblies

Evolution of pools level

Planning of containers

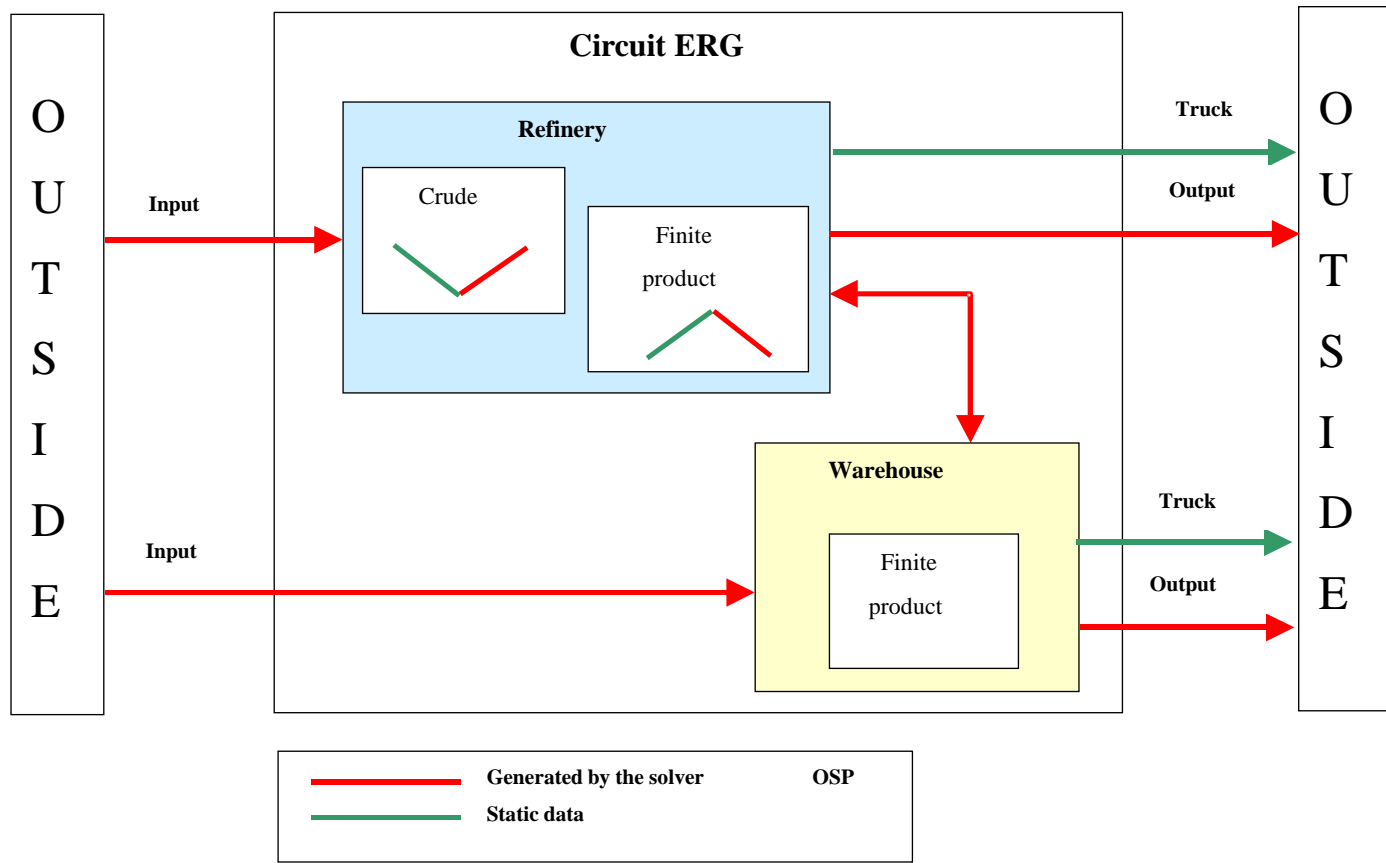

Planning of plants

## Logistics for Refineries

## Circuit optimization of logistics for Refineries

## Emergency Services

### ◆ Fire & Rescue Department of Rhône

- Volumetry
  - ▶ **2000 firefighters**
  - ▶ **15 centers**
- Regulatory Constraints (e.g.)
  - ▶ **Minimum rest between 2 shifts**
    - 11 hours
  - ▶ **Maximum working hours**
    - 48 hours maxi / 7 consecutive days
    - 44 hours maxi / 12 consecutive weeks
  - ▶ **Forbidden sequences of shifts**
    - Ex: Night-Day

## Emergency Services (2)

### ◆ Fire & Rescue Department of Rhône

- Optimization
  - ▼ **Annualization of 35 Hours**
    - Target: 1596 hours for each agent
    - Annual planning (updating every 3 months)
  - ▼ **Coverage of the needs**
    - Balanced coverage throughout the year
    - Uniform distribution of the qualifications
  - ▼ **Equal treatment of the agents (fairness)**
    - Number of shifts (Day / Night)
      - Week / Week-end / Holidays
    - Wishes of the agents (Rests, Week-end,...)

Resultats Jour - Trimestre 1

Resultats Nuit - Trimestre 1

## Mediterranean Ferries

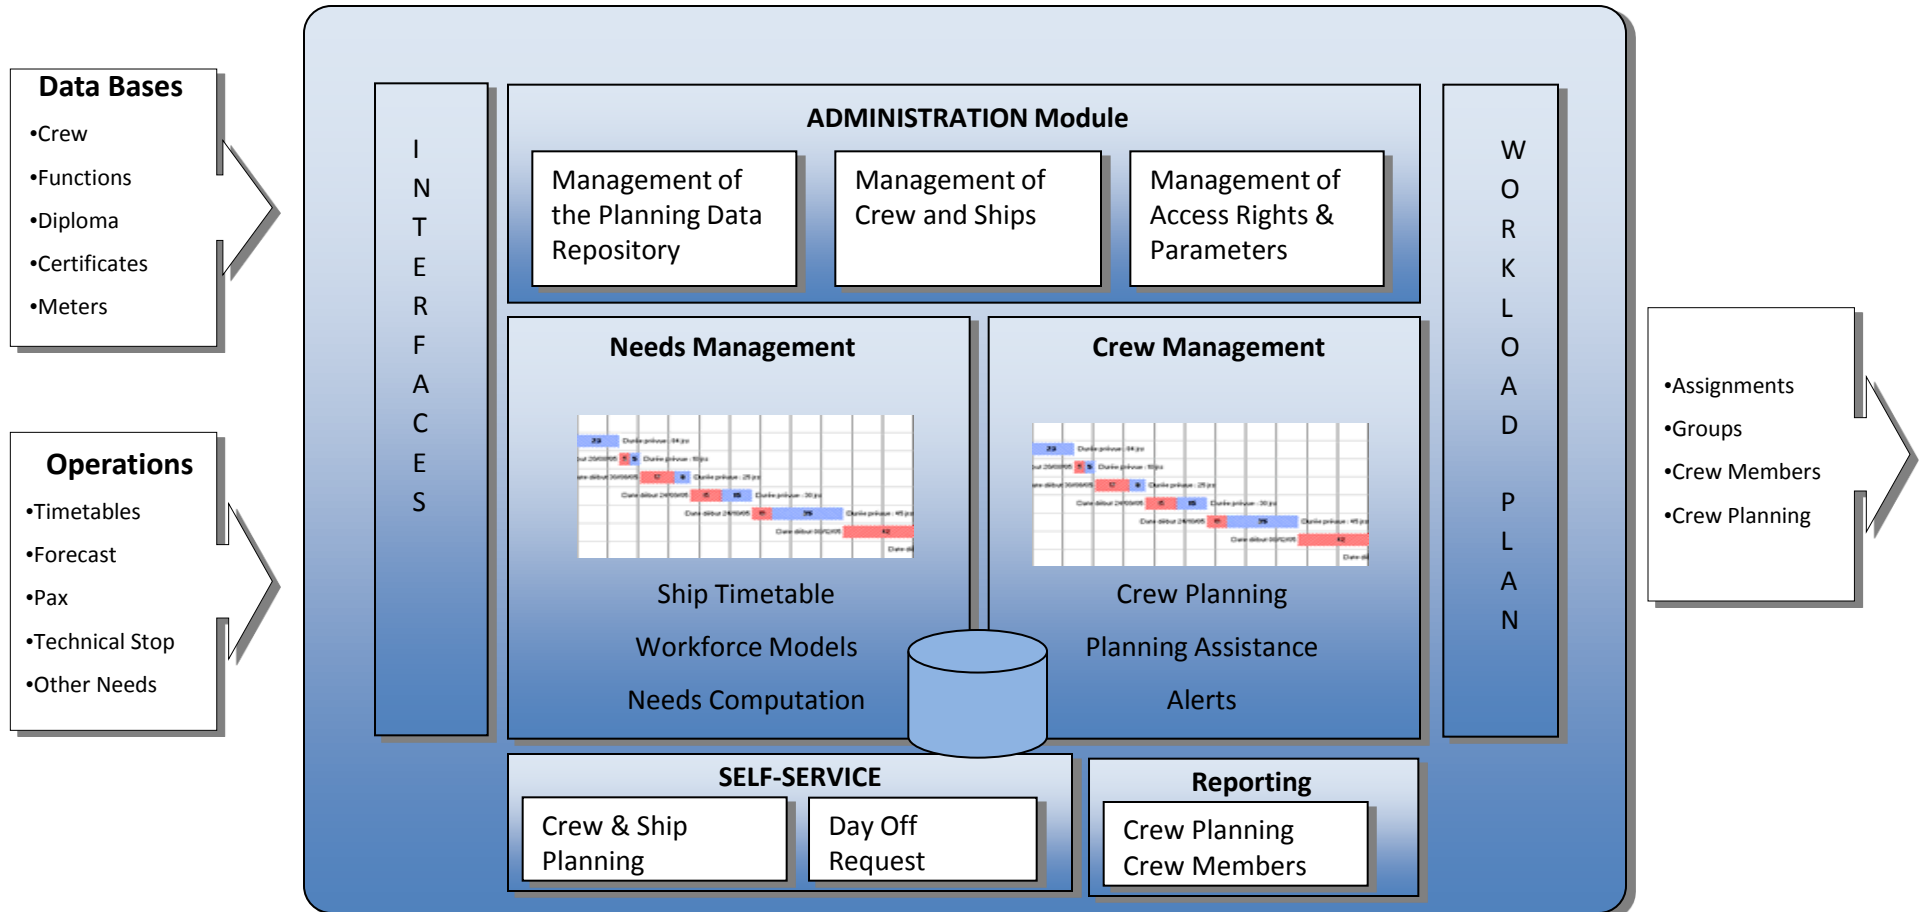

### ◆ SNCM case

- **Volumetry**
  - ▼ 2000 crews (with 800 CDD)
  - ▼ 9 ferries
  - ▼ 4 agences portuaires (Marseille, Ajaccio, Bastia, Nice)
  - ▼ 1 200 000 passagers / year
- **Very specific planning rules of « SNCM »**
  - ▼ Rights to « rest »
  - ▼ Substitutions
- **Different professions and qualifications**
  - ▼ Captain Staff
  - ▼ Engine machinery technicians
  - ▼ Catering / room services

## Crew Planning for Ferries

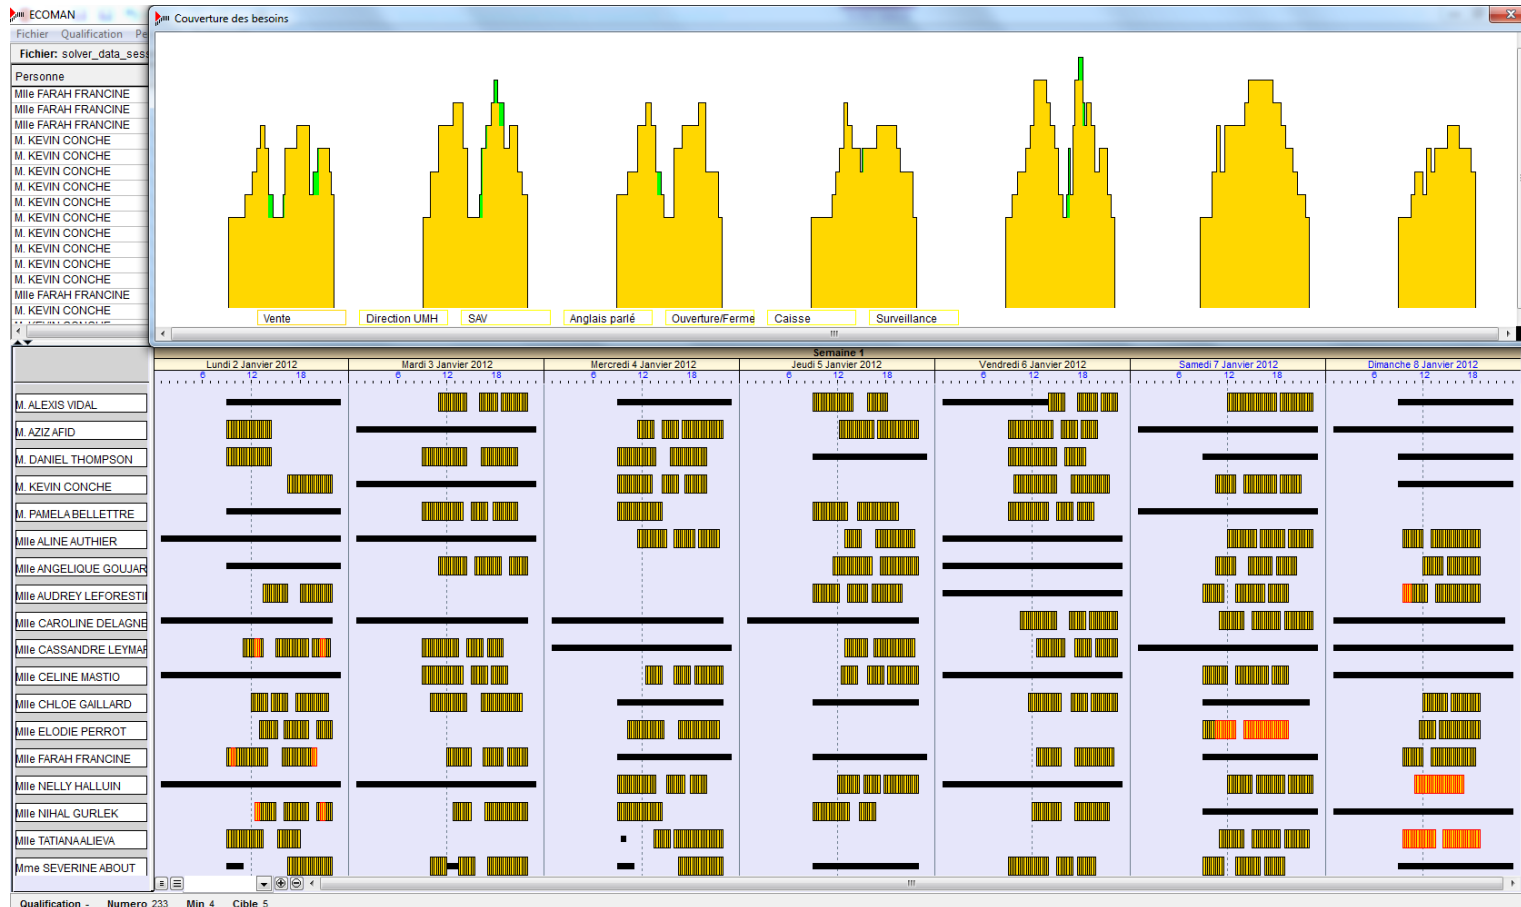

## Personnel Planning in Retail

### Profile of Needs / Salesmen

## Optimal covering of Needs

## New market / customer
